

Example Name	Brief Description	GitHub Source
<code>hello</code>	Simplest “Hello World” loadable module using <code>printk</code> .	<a href="#">martinezjavier/ldd3 – ch2/hello.c</a>
<code>hello_param</code>	Demonstrates passing parameters via <code>insmod</code> ( <code>module_param</code> ).	<a href="#">ldd3/misc-modules/hello.c</a>
<code>export / use_export</code>	Shows how one module exports symbols for another to use.	<a href="#">ldd3/misc-modules/export.c</a>
<code>scull</code>	“Simple Character Utility for Loading Localities” — core character driver with <code>open</code> , <code>read</code> , <code>write</code> , etc.	<a href="#">ldd3/scull/</a>
<code>scullop</code> , <code>sculld</code> , <code>scullv</code>	Variants of <code>scull</code> showing different memory management models (page-based, chunked, linked, virtual).	<a href="#">ldd3/scull/</a>
<code>faulty</code>	Module that deliberately crashes to demonstrate kernel debugging.	<a href="#">mharsch/ldd3-samples/faulty</a>
<code>oops</code>	Demonstrates triggering oops and inspecting kernel backtraces.	<a href="#">jesstess/ldd3-examples/faulty</a>
<code>scullconcurrent</code>	Shows safe concurrent access using semaphores and spinlocks.	<a href="#">ldd3/scull/</a>
<code>scullpipe</code>	Blocking I/O driver using wait queues for read/write synchronization.	<a href="#">ldd3/scull/pipe.c</a>
<code>sculluid</code>	Adds file ownership and user-based access control.	<a href="#">ldd3/scull/sculluid.c</a>
<code>scull_access</code>	Demonstrates file permission control and <code>open</code> policies.	<a href="#">ldd3/scull/scull_access.c</a>
<code>scullsingle</code>	Restricts driver to single/multiple open semantics.	<a href="#">ldd3/scull/</a>
<code>scullm</code>	Demonstrates mapping kernel memory to user space with <code>mmap</code> .	<a href="#">ldd3/scull/mmap.c</a>
<code>kalloc</code>	Demonstrates <code>kmalloc</code> , <code>vmalloc</code> , and slab allocator use.	<a href="#">mharsch/ldd3-samples/memory</a>
<code>short</code>	Simulated hardware I/O driver using the parallel port for I/O access and interrupt simulation.	<a href="#">ldd3/short/</a>
<code>shortprint</code>	Debug printing version of <code>short</code> for port I/O visibility.	<a href="#">ldd3/short/shortprint.c</a>
<code>shortirq</code>	Demonstrates interrupt handling and shared IRQs.	<a href="#">ldd3/short/shortirq.c</a>
<code>shortprintirq</code>	Interrupt handler with detailed event logging.	<a href="#">ldd3/short/shortprintirq.c</a>
<code>jit</code>	“Jiffy Interrupt Timer” — shows kernel timers, delays, and scheduling.	<a href="#">ldd3/jit/</a>

Example Name	Brief Description	GitHub Source
<code>jiq</code>	Demonstrates workqueues and bottom-half scheduling.	<a href="#">ldd3/jit/jiq.c</a>
<code>pipe_example</code>	Reader/writer synchronization via blocking I/O.	<a href="#">ldd3/scull/pipe.c</a>
<code>poll_example</code>	Demonstrates <code>poll()</code> and <code>select()</code> system calls.	<a href="#">ldd3/scull/pipe.c</a>
<code>usb-skeleton</code>	Minimal USB driver template used in Linux kernel examples.	<a href="#">mharsch/ldd3-samples/usb-skeleton</a>
<code>usbled</code>	Simple driver controlling a USB LED device.	<a href="#">mharsch/ldd3-samples/usbled</a>
<code>pci_skel</code>	Simple PCI probe/remove demo driver.	<a href="#">mharsch/ldd3-samples/pci-skel</a>
<code>pci_dma</code>	Demonstrates PCI DMA buffer allocation and transfer.	<a href="#">mharsch/ldd3-samples/pci-skel/dma.c</a>
<code>snull</code>	“Simple Network Utility for Loading Localities” — in-RAM virtual network driver implementing <code>net_device</code> .	<a href="#">ldd3/snull/</a>
<code>sbull</code>	“Simple Block Utility for Loading Localities” — RAM disk block driver using request queues.	<a href="#">ldd3/sbull/</a>
<code>tty_driver</code>	Simplified TTY example showing <code>tty_driver</code> registration and basic I/O.	<a href="#">mharsch/ldd3-samples/tty</a>
<code>misc_module</code>	Registers a device via <code>misc_register()</code> .	<a href="#">ldd3/misc-modules/misc-mod.c</a>
<code>procfs_example</code>	Demonstrates creating and managing <code>/proc</code> entries.	<a href="#">ldd3/misc-modules/procfs.c</a>
